Maximum Performance

The Calcium & Mineral Supplement

The Story Behind Maximum Performance

Maximum Performance was created to combat the deficiencies in our nation's soils as has been confirmed by report after report. Calcium is used up and excreted in sweat during work periods. It does this by pulling Calcium from the blood stream. This must be replenished through diet. When there is not enough calcium in the diet, the body pulls calcium from the bones, teeth, joints, and connective tissue. The body must replace about 20% of its total body calcium each year. If there is not an intake of proper forms of calcium, the bones can degenerate and, in severe cases, leave the bones like a web. This deficiency effects all of us, Horses, Dogs and Humans alike.

Reports say that our soils are very short on Calcium and other minerals. So how can we be sure that we are getting all the calcium and nutrients that we need to stay healthy and active for ourselves, our dogs and our horses? Maximum Performance provides a high Calcium content using the right balance of all the other minerals in the the purest forms available in their special formula for Horses, Dogs and Humans to provide a 90% absorption rate. You will be amazed with the Quick Results.

There are 144 Diseases that are directly related to a Calcium Mineral Deficiency Period.

There are over 100,000 athletes a year who die from Calcium Mineral deficiencies alone. Cardio Myopathy takes 65% and Aortic Aneurisms take 35%.

It is now proven that Calcium prevents Colorectal cancer with a [Calcium Supplement](#).

The FDA has left Celebrex, Vioxx and Fosomax on the market because of the pain people are in with their joints with all the side effects resulting. Why not use an all natural substance instead that can prevent Colorectal cancer all in one bottle?

Calcium allows the body to recover from soft tissue injuries, broken bones, and surgeries much faster while maintaining muscle mass in the process. Remember, this is for you and your pets! We recognize the overwhelming requirements of CALCIUM in the bodies of healthy functional horses. There is more CALCIUM in the body than any other mineral and the body needs to reabsorb and replace 20% annually. Many types of disease can result from a CALCIUM deficiency. Calcium strengthens bones, but also the cartilage and joint tissue. Calcium levels must be maintained in the blood stream for they are the vehicle which carries nutrients to every cell in the body. Maximum Performance has a **high CALCIUM content with a 90% bio-availability**. An imbalance of calcium, phosphorous and other minerals can prevent the absorption of calcium and other critical minerals. Maximum Performance has the right balance in the right forms to ensure a 90%+ absorption rate or bio-availability.

Maximum Performance uses only the proper blends of phosphorous, magnesium, copper, zinc, selenium, niacin, iron, iodine, potassium, biotin, folic acid, riboflavin, vitamins A, D, E, K, and B, all derived from the purest forms available.

Calcium in the right levels leads to increased bone structure and strength even during periods of heavy workout. The other minerals and vitamins strengthen other areas of the body and help the horse stay in over-all good health and able to give 100%. This very Special Formula will give quick results and is a natural product. You deserve the best health, and so does your pets.
